☞ First click on the INITIALISATION button in the window

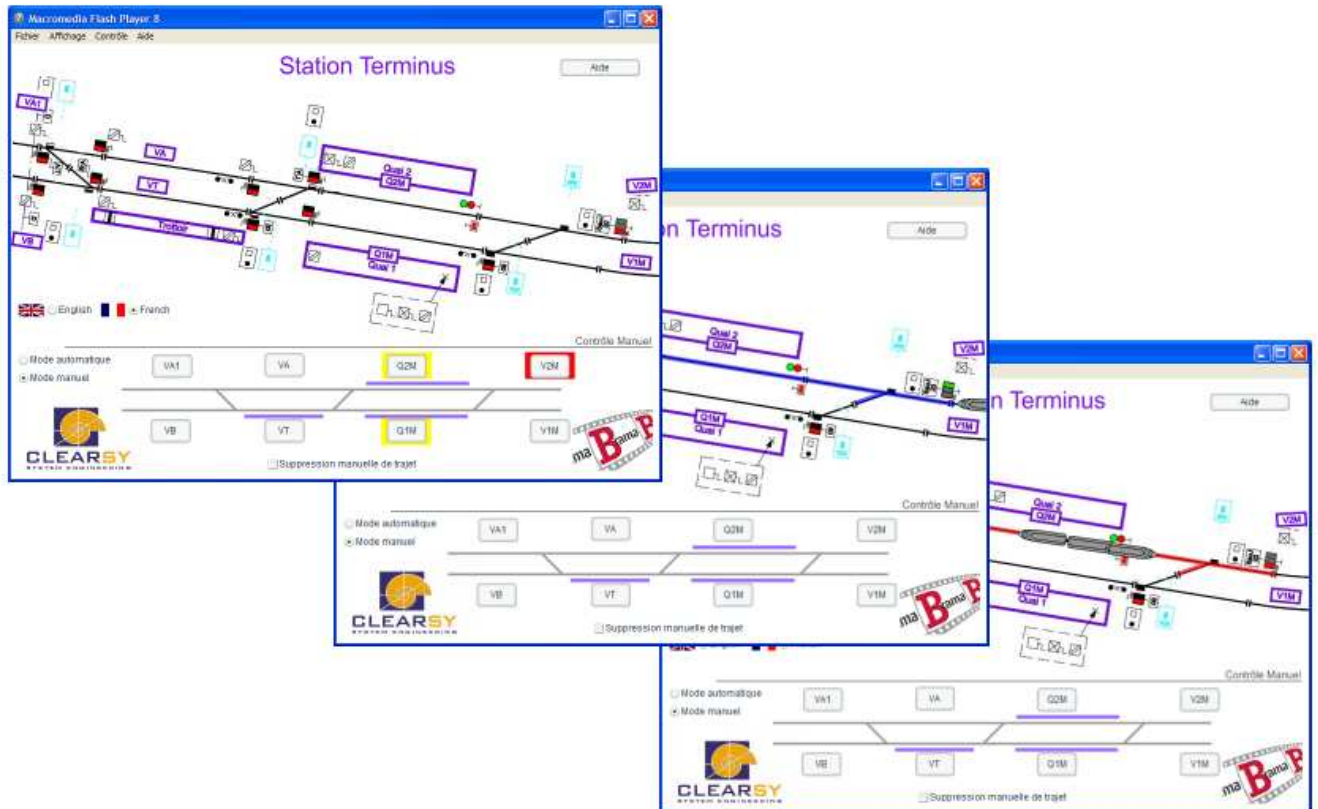

Instructions

Instructions and language B files are in the archive Bsource index.

Reserving a route

A subway train is only able to move onto a section of track if this section has been reserved in advance. In order to reserve a section, proceed in the following way:

- Click on the button corresponding with the start of your section (for example V2M). The button is then highlighted in red, and the buttons corresponding with the possible destinations are highlighted in yellow.
- Click on the button corresponding with the destination. The corresponding section is then classed as reserved and is highlighted in blue on the map. The light protecting this section turns green, and a subway train can then move onto the section.

Manually cancelling a reservation

The routes are automatically suppressed when a subway train leaves the corresponding route. However, in certain situations, it may be necessary to cancel the reservation of a route. To do this, ensure that the 'Suppression manuelle de trajet' (Manual suppression of route) box is ticked and select the route to be suppressed in the same way as it would have been reserved.
